

# Ruby, Cucumber and Selenium on Linux

1. `sudo apt-get install ruby1.9.1-dev`
2. Confirm the correct installation by calling: `ruby -v`
3. `sudo gem install selenium-webdriver`

If an error concerning the ssl certificates occurs, type in the following two lines and try afterwards again:

```
gem sources -r https://rubygems.org/  
gem sources -a http://rubygems.org/
```

4. `sudo gem install rspec`
5. `sudo apt-get install cucumber`
6. Confirm the correct installation by calling: `cucumber --version`
